

ABSTRACT OF THE DISCLOSURE

When requested by an application, a library unit provides a resource to the application, acquires an ID for identifying the application which has requested the
5 resource, and stores a combination of a resource name of the provided resource and the application ID in a table. When an application is completed, the library unit receives an application ID of the completed application, detects a resource name corresponding to the received application
10 ID in the table, and collects a resource specified by the resource name.
